PRASHANT JADHAV

Full-Stack PHP Developer | 3.10 Years of Experience

Pune, Maharashtra, India • prashantjadhav2743@gmail.com • +91 95032 45483 • linkedin.com/in/itsjadhavpatil

PROFESSIONAL SUMMARY

Results-oriented Full-Stack PHP Developer with 3.8 years of comprehensive experience designing, developing, and maintaining scalable, high-performance web applications using PHP, Laravel, CodeIgniter, Yii, JavaScript, and React.js. Proficient in designing high-performance database schemas and writing optimized SQL across MySQL and PostgreSQL. Proven track record delivering enterprise API integrations (REST, OAuth2, HMAC-SHA256, SFTP, webhooks), ERP synchronization with Odoo, and large-scale batch processing systems, including a 10x throughput optimization that generates 100,000 PDF documents in 33 minutes. A collaborative team player with a strong foundation in Agile/Scrum methodologies and MVC architecture, dedicated to writing well-designed, testable, secure code and empowering teams to achieve technical excellence.

CORE COMPETENCIES

Full-Stack Web Development • PHP Development • Laravel Framework • RESTful API Design & Integration • Third-Party API Integration • Database Design & SQL Query Optimization • System Architecture • Performance Tuning & Scalability • ERP Integration (Odoo) • Payment & Logistics Integrations • Batch & Queue Processing • Secure Authentication (OAuth2, HMAC-SHA256) • Web Application Security • Legacy Code Refactoring • Agile / Scrum Delivery • Requirement Gathering • Cross-Functional Collaboration • Debugging & Root Cause Analysis • Code Review • Unit Testing • Technical Documentation

TECHNICAL SKILLS

Programming Languages: PHP, JavaScript, SQL

Frameworks & Libraries: Laravel, CodeIgniter, Yii, React.js, jQuery, Bootstrap

Databases: MySQL, PostgreSQL, Database Design, Indexing, Query Optimization, Stored Procedures

Web Technologies: HTML5, CSS3, AJAX, JSON, XML, CSV, Responsive Design

APIs & Integrations: REST APIs, Webhooks, OAuth2, HMAC-SHA256, SFTP/FTP, EasyPost, DHL, Odoo ERP, Microsoft Power Apps

Methodologies: Agile, Scrum, MVC Architecture, SDLC, Object-Oriented Programming (OOP)

Testing & Quality: PHPUnit, Unit Testing, Debugging, Input Validation, Output Sanitization

Version Control: Git, GitHub, Branching & Merging, Pull Requests

Tools & Platforms: Docker, cPanel, Hostinger, GitHub Copilot, ChatGPT, Linux, Postman

PROFESSIONAL EXPERIENCE

301io — The Digital Transformation Experts — WTC, Kharadi, Pune

Full Stack Developer — *March 2025 – Present*

Apple Trade-In Project — Trade-In & Logistics Integration Platform

- Led the design and development of a comprehensive trade-in and logistics integration platform connecting Apple systems, Odoo ERP, shipping providers, and multiple third-party services.
- Implemented secure API integrations using HMAC-SHA256 authentication, OAuth2 token management, and SFTP-based data exchange to handle critical workflows such as ASN creation, item transfers, and invoice processing.
- Built an automated screening pipeline that periodically polls Apple's SFTP, processes ASN CSV files, generates shipping labels at multiple hierarchy levels, and synchronizes data with Odoo Purchase Orders.
- Designed a dual-flow architecture supporting both Retail (webhook-driven) and Screening (batch ingestion) processes, ensuring seamless coordination across international warehouses.
- Developed a custom shipping label generation system that replaced external providers for certain flows, eliminating recurring vendor costs while maintaining full compatibility with existing data contracts.
- Integrated multi-carrier support using EasyPost and DHL APIs, including rate selection, tracking, and delivery confirmation workflows.
- Engineered a real-time tracking synchronization service to maintain data consistency across internal systems, Apple endpoints, and Odoo ERP.
- Built an invoice processing pipeline with validation, artifact generation (PDF and R95), and secure publishing to SFTP using an idempotent, state-driven design.

- Implemented a detailed observability layer capturing full request-response cycles across all external integrations, enabling faster debugging and measurably improved system reliability.

Sky New Zealand Project — High-Volume Document Generation System

- Re-engineered a high-volume document generation system that was unable to meet SLA expectations, introducing chunked batch processing and optimizing rendering logic to significantly improve throughput.
- Achieved a 10x+ performance boost, enabling the generation of 100,000 PDF documents (average 200 KB each) within 33 minutes.
- Carefully analyzed system bottlenecks and redesigned the execution flow to ensure efficient memory utilization and parallel processing stability.
- Worked in a fast-paced Agile environment, collaborating closely with product managers and stakeholders to translate loosely defined requirements into actionable technical tasks.
- Reduced rework by clarifying scope early and aligning technical decisions with business expectations.
- Consistently met sprint commitments while maintaining code quality and performance standards.
- Contributed to improving overall system reliability and scalability for large-scale document processing workloads.

Fortune Services Ashoka Marg, Nashik
Backend PHP Developer *July 2023 – March 2025*

- Maintained and wrote scalable SQL queries for 8+ client projects, including College ERP and APMC applications, ensuring optimal performance and reliability.
- Contributed to all phases of the software development lifecycle, from gathering requirements to preparing and producing releases of software components.
- Enhanced existing functionalities and logic of legacy code for improvement, focusing on security best practices such as input validation and output sanitization.
- Developed a user-friendly school website that improved parent-student communication, and implemented a Library Management System with an optimized MySQL database for efficient inventory tracking.
- Applied version control systems in daily development — creating repositories, committing changes, managing branches, and collaborating with team members using Git.
- Developed and integrated a GPS tracking module using Microsoft Power Apps within a school ERP system, enabling real-time monitoring of student transport and enhancing student safety.

Fortune Services Ashoka Marg, Nashik
Intern — PHP Development *January 2023 – July 2023*

- Applied Object-Oriented Programming (OOP) concepts in PHP, including classes, objects, inheritance, encapsulation, and polymorphism.
- Gained foundational experience in Object-Oriented PHP and performed CRUD (Create, Read, Update, Delete) operations with MySQL databases.
- Assisted senior developers in debugging and writing unit tests using PHPUnit.
- Built a working command of web development fundamentals — HTTP protocol, request-response cycle, cookies, sessions, and the basics of HTML, CSS, and JavaScript.

EDUCATION & CERTIFICATIONS

Bachelor of Science — Savitribai Phule Pune University (SPPU), Pune 2018 – 2021

Full Stack Developer Certification — Phoenix Computer Academy, Nashik 2022

ADDITIONAL INFORMATION

- Experienced in PHP full-stack development and web application architecture, with a solid understanding of both front-end and back-end technologies.
- Proficient in using project management and deployment tools such as cPanel and Hostinger, as well as version control systems like Git.
- Skilled in building responsive and user-friendly interfaces using JavaScript, JSON, Bootstrap, HTML5, CSS3, and jQuery.
- Hands-on experience with React.js, primarily in developing simple and modular components.
- Collaborated effectively with IT teams on application development and issue resolution.
- Strong working knowledge of MySQL database design and optimization.
- Languages: English, Hindi, Marathi.
